

2. Qualys User Creation with Role Configuration

Aim

To create a new user account in the Qualys platform and configure appropriate user roles and permissions based on the user's responsibilities.

Procedure

1. Log in to the Qualys Cloud Platform using administrator credentials.
2. Open the Administration / User Administration section.
3. Select Users and click New User.
4. Enter the required user details such as:
 - First Name
 - Last Name
 - Email Address
 - Login Name
5. Select the required business unit or account, if applicable.
6. Configure the user's roles and permissions according to their responsibilities.
7. Assign only the required privileges, following the Principle of Least Privilege.
8. Configure additional permissions such as access to vulnerability management, asset management, reports, or scanning functions as required.
9. Review the configured roles and permissions.
10. Click Save/Create to create the user.
11. Verify that the newly created user appears in the user list with the assigned role.
12. If required, log in using the created account to verify that the assigned permissions work correctly.

Result

A new Qualys user account was successfully created, and appropriate roles and permissions were assigned based on the user's responsibilities.

Output

The Qualys User Administration page displays the newly created user along with the configured role, permissions, and account status.
