

3. Qualys Cloud Agent Deployment in Windows

Aim

To deploy and install the Qualys Cloud Agent on a Windows system and verify that the system is successfully registered with the Qualys Cloud Platform.

Procedure

1. Log in to the Qualys Cloud Platform using administrator credentials.
2. Navigate to the Cloud Agent module.
3. Open the Activation Keys section and create/select an appropriate activation key.
4. Select Windows as the target operating system.
5. Download the Qualys Cloud Agent installer for Windows.
6. Copy the installer to the Windows system where the agent needs to be deployed.
7. Open Command Prompt as Administrator.
8. Run the Qualys Cloud Agent installation command with the required activation key.
9. Wait for the installation to complete.
10. Verify that the Qualys Cloud Agent service is running on the Windows system.
11. Return to the Qualys Cloud Platform and open Cloud Agent → Agents.
12. Verify that the Windows machine appears in the agent list and is shown as Activated/Connected.

Result

The Qualys Cloud Agent was successfully deployed on the Windows system and the endpoint was registered with the Qualys Cloud Platform.

Output

The Windows endpoint is displayed under Qualys Cloud Agent → Agents, showing the agent status and system details. This confirms successful agent deployment and registration.
